PROFESSIONAL SUMMARY

Product Designer with 5+ years shipping live insurance, fintech and e-commerce products end to end, from research to handover. Lead designer on RexVerse and Rex Insurance's API gateway; previously rebuilt the Losode marketplace. Known for design systems, WCAG 2.1 accessibility, and documentation engineers can build from without guesswork.

SKILLS

End-to-End Product Design | UX Research & Usability Testing | Interaction Design | Design Systems | Information Architecture | High-Fidelity Prototyping | WCAG 2.1 Accessibility | Design Documentation & Handover

TOOLS & TECHNOLOGIES

Design: Figma, Framer, Adobe XD, Photoshop, Illustrator, Miro
Research & Analytics: Hotjar, Google Analytics
AI & Automation: Claude (Anthropic), ChatGPT, n8n, Gemini
Collaboration: Jira, Notion, Linear, Slack, Confluence, Trello, Google Workspace

WORK EXPERIENCE

Product Designer | Rex Insurance — May 2025 – Present
Lagos, Nigeria

- Lead end-to-end design of RexVerse, Rex Insurance's mobile app (onboarding, policy purchase, claims, account management), live on iOS and Android. Case study: **kufrey-portfolio.vercel.app/work/rex-insurance**
- Led the complete rebrand and redesign of the company website, **rexinsure.com**, giving Rex Insurance a new visual identity and a clearer path from product information to purchase.
- Redesigned the website's policy purchase flow by merging steps and removing friction points, increasing completed transactions by 30% and reducing drop-off by 25% (Google Analytics, last month of the old site vs first month after launch).
- Designed a multi-portal API gateway (admin and partner portals) that cut partner onboarding to under 3 minutes, with 5+ partners live. Case study: **kufrey-portfolio.vercel.app/work/api-gateway**
- Lead design of a Broker Portal for policy, client and commission management, and built the RSM Appraisal Portal HR uses to manage and track Regional Sales Manager performance reviews.
- Built and maintain a modular design system with engineering, applying WCAG 2.1 accessibility standards to meet enterprise and regulatory requirements; the dev team uses it as its source of truth.
- Ship every project with annotated screens, user guides and specs, so engineering builds what was designed instead of guessing at edge cases.
- Mentor a junior product designer, who under my guidance designed a visitor management system that tracks visitors and lets staff schedule visits.

UI/UX Designer | Techaven — Nov 2024 – May 2025
Lagos, Nigeria

- Led the full redesign of a live mobile betting app, covering onboarding, the home dashboard, bet placement and live results, simplifying the core betting and account flows.
- Built wireframes and high-fidelity interactive prototypes for usability testing and developer handoff, establishing a cohesive design language and interaction pattern library across the product.
- Wrote UX copy and microcopy for onboarding, error and empty states, working cross-functionally with PMs and engineers in a fast-paced sprint environment.

UI/UX Designer | Losode — Aug 2022 – Nov 2024
Lagos, Nigeria

- Owned end-to-end design for **losode.com**, a live fashion marketplace, rebuilding the full web and mobile experience from research through final UI. About 70% more designers onboarded after the rebuild, each into a templated storefront.
- Redesigned product listings, checkout flows and vendor dashboards, informed by usability testing and behavioural data.
- Built a design system aligned to the brand, with one product schema that normalises any vendor's input and generates each designer's storefront from shared components.
- Designed internal portals and management dashboards for back-office operations, working directly with PMs, engineers and business stakeholders, and presented design rationale and research findings to leadership.

EDUCATION

B.Sc Geography, University of Lagos (UNILAG) — 2018
